

**Section of General Internal Medicine  
Center for Translational and Policy Research of Chronic Diseases  
University of Chicago**

This is an opportunity to join a vibrant community of investigators with interests in health care policy, health disparities, health economics, quality of care, clinical medical ethics, patient-doctor communication, geriatrics, and diabetes.

We are specifically seeking a physician scientist at the junior faculty level with a focus on health outcomes research. The physician scientist will devote the majority of his/her time to the development and study of innovative interventions for the care of patients with chronic diseases. Successful candidates will be expected to participate in clinical care and teaching with significant time protected for research. Applicants must have a medical degree, possess excellent clinical and teaching skills, be BC/BE in internal medicine by the time of hire, and be eligible for medical licensure in the State of Illinois .

Qualified applicants are invited to apply by submitting a cover letter and CV online at the University of Chicago academic career opportunities site
