

The Medicine Institute of the Cleveland Clinic is seeking to recruit junior and mid-career investigators for its new Center for Value, Quality and Effectiveness Research. The center has strong institutional support with the goal of improving population health through more effective use of existing resources. Faculty appointments are available through the Cleveland Clinic Lerner College of Medicine. Candidates should have an MD or a PhD with advanced training in large database analysis, outcomes research, qualitative methods, biostatistics, cost-effectiveness, or shared medical decision making. Applicants interested in hospital medicine, cardiovascular disease, preventive medicine, chronic disease management and geriatrics/palliative care are particularly welcome. Qualifications include a track record of peer-reviewed publications and a clear plan for developing independent research funding. Investigators will have access to exceptional clinical data sources, generous support and strong mentorship. For physician investigator candidates, practice and teaching opportunities are available--board certification is required.

Cleveland Clinic is an equal opportunity employer and is committed to increasing the diversity of its faculty. We welcome nominations of and applications from women and members of minority groups as well as others who would bring additional dimensions to Cleveland Clinic's research, teaching and clinical missions. Cleveland Clinic is a smoke/drug free work environment.

**Please send a cover letter and current CV to**

Michael Rothberg, MD, MPH

Director, Center for Value, Quality and Effectiveness Research
